

DR. LIVINGSTONE.

very of the Nile Sources—Letter from the... to Lord Clarendon—A Sketch of... Discoveries.

did cascades, that made the dullest of my attendants pause and remark with wonder. I measured one of the streams—the Lofu—50 miles from its confluence, and found it at a ford 294 feet, say 100 yards, broad, thigh and waist deep, and flowing fast over hardened sandstone flag in September. The last rain had fallen on the 12th of May. Elsewhere the Lofu requires canoes. The Lofu drives a large body of smooth water into Liemba, bearing on its surface duckweed and grassy islands. This body of water was 10 fathoms deep. Another of the four streams is said to be larger than the Lofu, but an over-observant headman prevented my seeing more of it and another than their mouths. The lake is not large, from 18 to 20 miles broad, and from 35 to 40 long; it goes off north-northwest in a river-like prolongation two miles wide, it is said, to Tanganyika; I would have set it down as an arm of that lake, but that its surface is 2800 feet above the level of the sea, while Speke makes it 1844 feet only. I tried to follow the river-like portion, but was prevented by a war which had broken out between the chief of Liemba and a party of ivory traders of Zanzibar. I then set off to go 150 miles south, then west, till past the disturbed district, and explore the west of Tanganyika; but on going 80 miles I found the Arab party, showed them a letter from the Sultan of Zanzibar, which I owe to the kind offices of his Excellency Sir Bartle Frere, Governor of Bombay, and was at once supplied with provisions, cloth, and beads. They showed the greatest kindness and anxiety for my safety and success. The heads of the party readily perceived that a continuance of hostilities meant shutting up the ivory market; but the peace-making was a tedious process, requiring three and a half months. I was glad to see the mode of ivory and slave trading of these men—it formed such a perfect contrast to that of the raffians from Kilwa, and to the ways of the atrocious Portuguese from Lette, who were connived at in their murders by the Governors of Mozambique. After peace was made I visited Nisama, the Chief of Itawa, and having left the Arabs went on to Lake Moero, which I reached on the 8th September, 1867. In the northern part Moero is from 20 to 33 miles broad. Further south it is at least 60 miles wide, and is 50 miles long. Ranges of tree-covered mountains flank it on both sides, but at the broad part the western mountains dwindle out of sight. Passing up the eastern side of Moero we came to Cazembe, whose predecessors have been three times assisted by Portuguese. His town stands on the northeast bank of the lakelet Mofwe. This is from two to three miles broad, and nearly four long. It has several low, reedy islets, and yields plenty of fish—a species of perch. It is not connected with either the Luapula or Moero. I was 40 days at Cazembe's, and might then have gone on to Bangweo, which is larger than either of the other lakes; but the rains had set in, and this lake was reported to be very unhealthy. Not having a grain of any kind of medicine, and as fever, without treatment, produced very disagreeable symptoms, I thought that it would be unwise to venture where swelled thyroid gland, known among us as Derbyshire neck, and elephantiasis (scroti) prevail. I then went north for Ujiji, where I have goods, and I hope letters, for I have heard nothing from the world for more than two years; but when I got within thirteen days of Tanganyika, I was brought to a standstill by the superabundance of water in the country in front. A native party came through, and described the country as inundated so as often to be waist deep, with sleeping places difficult to find. This flood lasts till May or June. At last I became so tired of inactivity that I doubled back on my course to Cazembe. To give an idea of the inundation which, in a small way, enacts the part of the Nile lower down, I had to cross two rivulets which flow into the north end of the Moero: one was thirty and the other forty yards broad, crossed by bridges; one had a quarter, the other half a mile of flood on each side. Moreover, one, the Luo, had covered a plain breast of Moero so that the water on a great part reached down the knees to the upper part of the chest. The plain was of black mud, with grass higher than our heads. We had to follow the path which in places the feet of passengers had worn into deep ruts. Into these we every now and then plunged and fell, over the ankles in soft mud, while hundreds of bubbles rushed up, and, bursting, emitted a frightful odor. We had four hours of this wading and plunging. The last mile was the worst; and right glad we were to get out of it and bathe in the clear, tepid waters and sandy beach of Moero. In going up the bank of the lake we first forded four torrents, thigh deep; then a river 80 yards wide and 300 yards of flood on its west bank; so deep we had to keep to the center, then four brooks from 5 to 25 yards broad. One of these, the Chungu, possesses a somewhat melancholy interest, as that on which poor Dr. Lacerda died. He was the only Portuguese visitor who had any scientific education, and his latitude of Cazembe's Town on the Chungu being 50 miles wrong, probably reveals that his mind was clouded with fever when he last observed, and any one who knows what that implies will look on his error with compassion. The Chungu went high on the chest, and one had to walk on tiptoe to avoid swimming. As I crossed all these brooks at high and low water, I observed the difference to be from 15 to 18 inches, and from all the perennial streams the flood in the water. The side of the rivers and country made me go in the very lightest marching order; took nothing but the most necessary instruments, and no paper except a couple of note-books and the Bible. On unexpectedly finding a party going to the coast, I borrowed a piece of paper from an Arab, and the defects unavoidable in the circumstances you will kindly excuse. Only one of my attendants would come here: the others, on various pretenses, absconded. The fact is, they are all tired of this everlasting tramping, and so verily am I. Were it not for an inveterate dislike to give in to difficulties, without doing my utmost to overcome them, I would abscond too. I comfort myself by the hope that by making the country and people better known I am doing good; and, by imparting a little knowledge occasionally, I may be working in accordance with the plans of the all-embracing Providence. I am never deprived of the belief of all the more intelligent of our race, that my efforts may be appreciated in the good time coming yet. I was in the habit of sending my observations to the Cape Observatory, where Sir Thomas Maclean, the Astronomer Royal, and the assistant astronomer, Mr. Mann, bestowed a great deal of gratuitous attention on them in addition to the regular duties of the observatory. They tested their accuracy in a variety of ways, which those only who are versed in the higher mathematics can understand and appreciate. The late Earl of Ellesmere publicly said of a single sheet of these observations that it contained more true geographical information than they contained more true geographical than many large volumes. While the mass of ob-

servations which went to the Royal Observatory at the Cape required much time for calculation, I worked out a number in a rough way, leaving out many minute corrections, such as for the height of the thermometer and barometer, the horizontal parallax and semi-diameter of planets, using but one moon's semi-diameter and horizontal parallax for a set of distances, though of several hours' duration, corrections for the differences of proportional logarithmizing, etc., and with these confessedly imperfect longitudes, made and sent home sketch maps to give general ideas of the countries explored. They were imperfect, as calculated and made in the confusion of the multitude of matters that crowd on the mind of an explorer, but infinitely better than many of the published maps. Sir Thomas Maclean, for instance, says that, short of a trigonometric survey, no river has been laid down so accurately as the Zambesi; and Mr. Mann, after most careful examination of the series of chronometric observations in positions which more than once ran from the Sen of Zette up to Lake Nyassa, any error in the longitude cannot possibly amount to four minutes. Well, after all my care and risk of health, and even of life, it is not very inspiring to find 200 miles of lake tacked on to the northwest end of Nyassa—and these 200 miles perched up on the upland region and passed over some 3000 feet higher than the rest of the lakes. We shall probably hear that the author of this feat claims therefrom to be considered a theoretical discoverer of the sources of the Nile. My imperfect longitudes and sketches led some to decerate the perfect ones from the observatory. This position was fixed by seven sets of lunar distances; that is at least 63 distances between the moon and stars, and probably a hundred altitudes of sun or stars, all made in risks of these men—it formed such a perfect contrast to that of the raffians from Kilwa, and to the ways of the atrocious Portuguese from Lette, who were connived at in their murders by the Governors of Mozambique. The six were thrown aside, and the seventh adopted, because a Portuguese said to me that he thought that spot might be about midway between Ambaca and the sea. Ambaca he had never seen; and the folly of intermeddling is apparent from the change not making the spot perceptibly nearer the imaginary midway, and no one had ever observed them before, nor in our day will observe again. Other freaks, and one specially immoral, were performed, and to my gentle remonstrance I received only a giggle. The generation my positions have suffered is probably unknown to the Council, but that it is all the more reason why I should adhere to my resolution to be the guardian of my own observations till publication. I regret this, because the upsetting of the canoe, or anything happening to me, might lead to the entire loss of the discoveries. My borrowed paper is done, or I should have given a summary of the streams which, flowing into Chambeze, Luapula, Luabala, and the lakes, may be called sewers. Thirteen all larger than the Isis at Oxford, or Avon at Hamilton, run into one line of drainage, five into another, and four into a third receptacle—twenty-three in all. Not having seen the Nile in the north, I forbear any comparison of volume. I trust that my labors, though much longer than I intended, may meet with your Lordship's approbation. I have, etc., DAVID LIVINGSTONE.

BLANK BOOKS. Important to Book-keepers. JUST PUBLISHED, THE "CATCH-WORD" LEDGER INDEX. (COPYRIGHT SECURED). Book-keepers and all others having to use an Index will find this a very valuable book. By using the "Catch-Word" Index, it will not only save time and eyesight, but the finding of a name quickly is a mathematical certainty. You are invited to call and examine it. PUBLISHED BY JAS. B.
